June is early this Year

The June newsletter is being issued a week early as there is so much going on we don't want you to miss out.

25th May to 1st June

A week of radio at "Crowsheath Fishery", CM11 1JT, nr. Billericay.

Several club members are staying on site and other members are welcome to turn up ad-hoc to see operating /P. Bring your own food, drink, chair and equipment if you fancy a go yourself.

2nd June

This is immediately followed by an Astronomy Field Day at Hadleigh Country Park. Our website gives times of Satellite Passes, but there will be VHF and HF in operation too. No need to book, just turn up and support the club.

More information...

www.ThamesARG.org.uk/Events

Get Knotted

7th June

The club presentation on 7th June is about the practical skill of knots. Please bring a small length of flexible rope or cord with you so you have some working examples to take home. There will be examples of TARG personalised merchandise on display to promote a corporate image at events.

16th June

The Antenna Field Day at the QTH of Gary MOICG (who gave the talk on identifying weak HF signals).

Gary hosts a mini-antenna farm and seeing so many different models on display is an education. Advance Booking is a requirement, via Mark MOIEO, and the event is WX dependant.

Further ahead

14th + 15th Sept:

Watt Tyler Country Park: Military Fixed Monuments (GB2MFM). 2nd year for this TARG event. You can operate either from the "Control Bunker" or /M /P from another military monument. More info to follow near the time; but make a note in your diary now.

Mini-Me

21st and 22nd Sept: ! New !

Canvey Miniature Railway, being organised by Ray G7BHQ using Special Event Callsign: GB2CMR.

Sat will be Operating from Jubilee Hall; and Sun will be at the railway location as a public event pointing to TARG HQ with further displays and Table Top Stalls (cakes etc).

All events are a chance to impress. Please engage a friendly manner representing the club and hobby in best possible light.

For the Record

All candidates passed their Online Intermediate Course in May. Thanks to Andrew M0ONH for talk on mini-computers. Anticipate a follow up due to popular demand.
